

Addendum: Connection Options

The fitted 3.5mm TRS mini stereo plug is configured for mono connections and should not be directly connected to a stereo socket (such as found in a phone/headphone socket). Doing so risks damaging the source device.

An optional stereo to separate left and right mono splitter is available on request for these applications.

A mono to dual mono splitter is also available for connecting two earpieces to one mono source.

A BPO/GPO B-gauge adaptor is also available on request – please confirm the wiring connections required for the adaptor as these vary.
